As Italy modernizes its power infrastructure, smart grid technologies and digital substations are becoming critical for energy efficiency and real-time monitoring.

It focuses on communication networks and systems in substations. Its main aim is to provide interoperability between Intelligent Electronic Devices (IEDs), regardless of ...

Data Concentrators Substation Gateways Protocol Convertors Remote Input/Output Devices Remote IO units are of particular interest in very large applications. The cost of the copper cabling and the pulling, and terminating of those cable can be very high. For this reason there is a lot of interest in distributing IO devices throughout a station and communicating to them through a network. The remote IO device presents a number of chal...
