How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. How does battery chemistry affect the cost of energy storage systems?

Should you invest in a commercial battery storage system?

Investing in commercial battery storage systems now offers benefits such as shorter payback periods, energy independence, reduced peak power costs, and achieving sustainability or carbon neutrality goals faster. Additionally, government incentives make systems more affordable.

Are lithium ion batteries expensive?

Lithium-ion batteries are the most popular due to their high energy density, efficiency, and long life cycle. However, they are also more expensive than other types. Prices have been falling, with lithium-ion costs dropping by about 85% in the last decade, but they still represent the largest single expense in a BESS.

Which battery chemistry plays a crucial role in cost?

Battery chemistry plays a crucial role in cost. Lithium Iron Phosphate (LFP) batteries are generally more cost-effective and safer compared to Nickel Manganese Cobalt (NMC) batteries. LFP batteries are favored in commercial applications due to their lower cost and higher safety profile.
