Is solar energy a building block for Berlin's climate protection strategy?

The expansion of solar energy use is emphasised as a particularly important building block in Berlin's climate protection strategy, since, with over 560,000 buildings in Berlin, there are rooftops and house facades aplenty, unlike suitable wind power sites.

Does Berlin need a solar system?

25 percent of the electricity generated in Berlin can be obtained from photovoltaic systems. To achieve this goal, solar systems with an output of around 4,400 megawatts peak need to be installed on Berlin's roofs: on detached and semi-detached houses, commercial buildings, apartment buildings and public buildings.

How much solar power does Berlin have?

According to the master plan study for the "Masterplan Solarcity Berlin", the State of Berlin owns 5.4 % of Berlin's buildings. Their roof surfaces account for 8.3 % of the solar potential (SenWEB 2019). On the public buildings in Berlin, there are 691 PV systems with a total installed capacity of 42.1 MWp (as of April 1, 2023).

What is solarzentrum Berlin?

To start tapping more into the potential of solar energy, both in the private and the public sector, the SolarZentrum (solar centre) Berlin was opened in May 2019. It is a component of the "Masterplan Solarcity", which works as an independent advisory centre on the topic of solar energy (SolarZentrum Berlin, only in German).

Berlin, Germany has inaugurated a new solar power plant that marks a pivotal advancement in renewable energy implementation within the region. Officially opened on June ...

necessary in order for Berlin to on a federal level as well as a mix you too can get involved and help become climate neutral and con- of new regulatory instruments. to realise the Solarcity ...
