What is a rack-mountable network/server UPS system?

A rack-mountable network/server UPS system conditions input power 24x7 to ensure that your equipment always receives reliable power and protection from damaging and disruptive power problems. It also supports your equipment during power failures, providing enough battery backup runtime to outlast shorter outages.

What is a rack power distribution unit?

A Power Distribution Unit (PDU) is an appliance made for transmitting electrical energy to numerous devices within the server rack. It acts as an important part in data centers, which guarantees continuous and reliable power supply from a rack mount PDU to servers and networking devices.

What is a rack mount PDU?

A: A power distribution unit that is mounted on a server rack to manage power supply among multiple equipment is what we call a Rack Mount PDU. It becomes important in the data center because of its ability to ensure even distribution of power, improve power management and control usage. Q: What should I consider when selecting a rack mount PDU?

What is a 1U rack-mount power distribution unit?

A: A 1U Rack-Mount Power Distribution Unit saves space because it occupies just one rack unit (1u) within your server cabinet. This makes it perfect for situations where you need to maximize every inch of available vertical mounting space on the frame.

Explore our comprehensive Rack PDU Selection Guide for server racks. Find the perfect power distribution unit from Eaton for your data center or network environment. Choose ...

APC Basic Rack PDUs provide reliable power distribution via a single input with multiple output receptacles and distributes power from low-amperage, single-phase circuits to ...
