In the second chapter of our Chasing Zero series exploring the hard realities of the energy transition, we assess the major developments in Asia as the region looks to stimulate ...

This report provides a brief overview of ASEAN's power sector landscape in 2023, tracks energy transition development in the past five years, presents several scenarios on ...

East Asia is set to remain the top wind power production region thanks to a project development pipeline that will expand current wind power capacity by 65% by the end of 2030, ...

Operating solar and wind capacity in Southeast Asia grew in 2023 by a fifth, reaching over 28 gigawatts (GW), accounting for 9% of the total electricity generation capacity, ...

Wind power in Asia is an important component in the Asian energy industry and one of the key sources of renewable energy in the region. As of April 2016, the installed capacity of wind power in Asia (excluding the Middle East) totalled 175,831 MW. Asia is the fastest growing region in terms of wind energy, having increased its installed capacity by 33,858 MW in 2005 (a 24% increase over 2...

This study examined the recent changes and future projections under different carbon emission levels in the wind power potential (Wpot) over East Asia using the ERA5 ...

In this explainer, Dialogue Earth explores how various mainland Southeast Asian countries are engaging with wind power development. While Thailand has aggressively ...

Energy lawyers explain who produces the most wind power in Asia, China's leading role in the market and the challenges of rapidly scaling up Asian offshore wind

Distributed Energy Systems (DESS) can solve these challenges due to the increasing availability of small power generation and intelligent grid technologies. It is necessary to find what role ...

A supergrid, a vast interconnected power network, is envisioned to carry clean energy across Southeast Asia, but its execution has been complex due to diverging priorities ...

Mainland China, Taiwan, South Korea, Japan and Vietnam collectively target 172 gigawatts (GW) of offshore wind power by 2030, up from the current installed capacity of ...

East Asia is set to remain the top wind power production region thanks to a project development pipeline that will expand current wind power capacity by 65% by the end of 2030,...
