What are China's solar PV exports?

In 2021, the value of China's solar PV exports was over USD 30 billion, almost 7% of China's trade surplus over the last five years. In addition, Chinese investments in Malaysia and Viet Nam also made these countries major exporters of PV products, accounting for around 10% and 5% respectively of their trade surpluses since 2017.

Which countries buy the most solar modules in 2023?

China has long been the solar module supermarket to the world, and its dominance will only increase in the coming years. Europe, in particular, has become China's best customer, buying nearly 60 percent of all solar modules exported from China in the first six months of 2023, according to clean-energy think tank Ember.

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity - ten times more than Europe - and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.

How many dumping and import taxes are imposed on solar PV?

Since 2011, the number of antidumping, countervailing and import duties levied against parts of the solar PV supply chain has increased from just 1 import tax to 16 duties and import taxes, with 8 additional policies under consideration. Altogether, these measures cover 15% of global demand outside of China. IEA. Licence: CC BY 4.0

From Q4 2025, China will cancel the 13% VAT rebate previously applied to exports of solar modules and storage systems. With China supplying over 80% of global solar modules and ...
