Who operates a virtual power plant in Germany?

GETEC ENERGIE operates one of the largest virtual power plants in Germany. It is the bedrock for our energy management services and offers our customers a wide range of options. GETEC ENERGIE has successfully operated a virtual power plant since 2010.

What are virtual power plants (VPP)?

Virtual power plants digitally integrate thousands of small energy resources like solar, wind, biogas, and battery storage, managing them centrally to ensure continuous and balanced electricity supply. These systems are not physically centralized, but combine distributed resources through a unified platform.

How will a virtual power plant affect the power grid?

The total capacity of this virtual power plant, currently 250 MWh, is growing continuously and is expected to reach 1 GWh in the next few years. This will provide the power grid with a digital and decentralised buffer storage that can balance the supply and demand of renewable energies.

What is a high voltage & large capacity energy storage system?

1. High voltage and large capacity: Meet the energy storage needs of high power and large capacity, store more electric energy, and provide stable power support for large electrical equipment or systems. 2.

Whether retrofitting existing infrastructure or building a decentralized energy network, this cabinet empowers businesses to cut costs, enhance sustainability, and ensure uninterrupted power.

Our energy storage cabinet, a 4th-generation innovation from 16 years of industry leadership, is tailored to industrial and commercial needs. It excels in peak shaving, virtual power plant ...

A Virtual Power Plant (VPP), Virtual Aggregator (VA), or simply Aggregator, represents the association of

several Distributed Energy Resources (DERs) orchestrated to ...

High voltage and large capacity: Meet the energy storage needs of high power and large capacity, store more electric energy, and provide stable power support for large electrical equipment or ...

For example, a typical German home with a 5kW solar system uses a 10kWh outdoor cabinet to store excess daytime energy, cutting grid reliance by 40-60% and slashing ...

If indoor installation isn't possible, we offer flexible alternatives: outdoor cabinets for compact, all-in-one systems or fully preconfigured, ready-to-connect container solutions in various sizes to ...

On a stormy North Sea night, wind turbines spin furiously - but instead of wasting excess energy, Germany's energy storage power plants are quietly banking electricity like squirrels storing ...

Suitable for both on-grid and off-grid scenarios, our cabinets convert fluctuating energy prices into predictable costs, ensuring uninterrupted power supply for production lines even during grid ...

Virtual power plants digitally integrate thousands of small energy resources like solar, wind, biogas, and battery storage, managing them centrally to ensure continuous and ...

The VPP not only allows to aggregate thousands of electricity producers, consumers, and storage units. By intelligently controlling their feed-in and consumption, their power and flexibility can ...

In an era where renewable energy integration faces grid stability challenges, the 1500V Liquid Cooling TTSEVGO emerges as a game-changer. This high-voltage energy storage cabinet ...
