Should you run your air conditioner on solar?

The answer is a resounding yes. But it is followed by a very important "but." Running your lights, your TV, or your laptop on solar is simple. Running an air conditioner is a different beast entirely. It's a power-hungry appliance with a secret weapon that can bring lesser solar systems to their knees.

How does solar power affect your air conditioner?

Your air conditioner draws from this solar power first, only pulling from the grid if it needs more. Any excess solar power you generate is exported to the grid, often for credit. The Bottom Line: You are directly using sun power to run your AC, which can dramatically lower your electricity bill, especially in the summer.

Is a DC air conditioner better than a standard AC unit?

A standard AC unit forces you to do this. A DC air conditioner, however, is designed to run directly on the raw DC power produced by your solar panels and stored in your batteries. The Result: By skipping the conversion process entirely, a DC air conditioner can be 20-40% more efficient than a standard AC unit of the same size.
