What are the best server racks for building a strong IT infrastructure?

The server racks market is mainly dominated by suppliers like Vertiv, APC, Rittal, and Tripp Lite. However, other great options also exist. In this article, we'll look at the seven best server racks for building a strong IT infrastructure, along with key factors to consider.

Why do data centers need server racks?

As data centers have grown in complexity and size alongside the exponential expansion of the internet, server racks have also grown to become an indispensable component of network infrastructures.

How much space does a server rack occupy?

One rack unit (1U) occupies a vertical space of 1.75 inches (44.45 mm). Typical server rack heights are 42U and 48U for larger floor-standing server racks and 24U and 12U for smaller size racks. Server rack depth: Server rack depth refers to the distance between the front rail and the back rail of the rack.

What are the different types of server racks?

Self-contained server racks -- These network racks have integrated air conditioning that ensures climate control in any environment. They have a cooling capacity of 800-12,000 BTU. Portable server racks -- The height range on these server racks is 8U to 20U. Most consider this the lightweight yet durable option because the racks are still enclosed.

To help data center architects and IT staff in those duties are modern server racks, ranging from inexpensive simplified units to fully integrated cabinets with hot-swappable capabilities and air ...

Everything you need to know about server racks and how to buy one for your business. Our guide covers different types of server racks, their features, and factors to consider when purchasing.
