---

As an effective energy storage technology, rechargeable batteries have long been considered as a promising solution for grid integration of intermitte...

The Mn-H battery chemistry provides a methodology towards the development of high energy density, fast charging rates and ultrastable batteries with potentials for grid-scale ...

Aqueous manganese-based redox flow batteries (MRFBs) are attracting increasing attention for electrochemical energy storage systems due to their low cost, high safety, and ...

Here, we report a rechargeable manganese-hydrogen battery, where the cathode is cycled between soluble Mn2+ and solid MnO2 with a two-electron reaction, and the anode is ...

Description: The capacity and energy density of manganese metal batteries are greatly enhanced by developing the first cathode based on dual storage mechanism in this work.

Rechargeable manganese-based batteries (RMBs) have risen as a viable substitute for conventional lithium-based energy storage systems, driven by their inherent ...

Here, we report an aqueous manganese-lead battery for large-scale energy storage, which involves the MnO 2 /Mn 2+ redox as the cathode reaction and PbSO 4 /Pb redox as the anode ...

Powering our electrical grid with renewable energy will require significant grid-sized battery storage. Existing battery technology is unlikely to be sufficient, but aqueous ...

Scientists at Berkeley Lab suggest that manganese could be used to create high-performance battery cathodes. Manganese is a far more abundant metal than nickel and ...

This review provides a comprehensive analysis of aqueous manganese-ion batteries, evaluating key obstacles and emerging strategies for material and electrolyte design. ...
