What is a high density Data Center (DDC)?

An Energy Efficient Data Center Solution for High Density Deployments DDC is redefining high-density cooling with its patented S-Series cabinets, delivering unprecedented 100kW air and 400kW liquid-to-chip ready cooling per cabinet.

What is a s-series data center cabinet?

Designed with NEMA 3R certification,built-in security and fire suppression,redundant motors and coils,and granular environmental control,the S-Series cabinets lower your loss footprint from an entire data center to a single cabinet,reducing operation and financial risk to expensive equipment from fire and water in your data center.

What is DDC Cabinet technology?

Our cabinet technology helps modernize data centerswith more modular,scalable,flexible,and efficient solutions by delivering intelligent power management,real-time environment monitoring,and dynamic management. DDC ensures the highest-quality performance for your valuable equipment that lowers TCO and reduces operating and financial risk.

How do ultra-high density cabinets work?

Deploy ultra-high-density cabinets next to traditional IT cabinets and dynamically manage density as workloads expand and contract for ultimate flexibility. As workloads transform, dynamically scale from 1kW to 100kW using air cooling.

Sustema offers modern network or server rack cabinets tailored to your specific needs. Our enclosures are built for maximum load capacity & data center space optimization, structured ...
