How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from EUR250 to EUR400 per kWh, with a clear downward trajectory expected in the coming years.

How many battery energy storage systems did Europe install in 2024?

In 2024, Europe installed 21.9 GWh of battery energy storage systems (BESS), marking the eleventh year of record-breaking annual additions since 2013, when our records began. The latest additions take the total running European battery fleet to 61.1 GWh at the end of 2024.

How much battery storage capacity does the EU have?

Narrowing the scope to the European Union (EU), 18.5 GWh of BESS were installed across the bloc in 2024, equivalent to 85% of existing installations on the continent. As consequence, EU total operating battery storage capacity reached 49.1 GWh at the end of 2024.

How much does battery storage cost?

The largest component of utility-scale battery storage costs lies in the battery cells themselves, typically accounting for 30-40% of total system costs. In the European market, lithium-ion batteries currently range from EUR200 to EUR300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves.

The purpose of the report is to describe the state of the primary (non-rechargeable) batteries market in Central and Eastern Europe, to present actual and retrospective information about ...

The dramatic scaling of battery manufacturing capacity across Europe and globally has been a primary driver
