How much solar power does Poland have?

As of the end of February 2025, Poland 's installed grid-connected photovoltaic (PV) capacity reached 21.8 GW, an increase of 25.7% over the previous year. Solar energy accounts for about 64% of the country's total renewable energy capacity of 34.3 GW and about 30% of its total installed power capacity of 72.4 GW.

Why is solar energy important in Poland?

Solar energy in Poland is a rapidly growing sector of the country's renewable energy industry, driven by falling technology costs, government incentives, and increasing public interest in sustainable energy. Solar power is key to the Polish government's plan to produce 75% of electricity from carbon-free sources (renewables and nuclear) by 2040.

How much solar power does Poland have in 2023?

At the end of 2023, Poland had 17 GW of installed PV capacity (approximately 0.45 kW per capita) and ranked sixth in the European Union, while first-place Germany had nearly 82 GW of PV capacity (approximately 0.98 kW per capita) [11, p. 29]. At the same time, the number of micro-installations in Poland is increasing year by year.

How big is photovoltaic energy generation in Poland?

In Poland, which is the subject of this article, more accurate data on photovoltaic energy generation mainly cover the period from 2015, when the installed capacity of micro-installations, small installations, and photovoltaic farms above 1 MW totalled around 200 MW. By 2023, it was already as high as 17,080 MW [11, p. 23].

D6 1 portable rechargeable outdoor Bluetooth speaker radio support solar charging flashlight TF card playback Description 1 Bluetooth 5.0 the new Bluetooth 5.0 technology provides stable ...
