What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

How do solar tiles work?

Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof. Photovoltaic cells in solar tiles turn sunlight into direct current (DC) energy.

What is a ridge tile?

As the name suggests, this ridge tile is smaller than the Half Round Ridge and is often used on lower level roofs such as porches or canopies. It can also be used as a hip. Where 2 roofs of different pitches intersect, it's not possible to use Dreadnought hips, and a third round ridge provides a tidy solution.

How do Solar Roof shingles work?

Solar roof shingles work on the same principle as traditional solar panels. When photovoltaic cells absorb sunlight, they create a flow of free electrons, which creates an electric current that powers the home.
