What is a battery energy storage system?
A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of energy storage technology that uses a group of batteries in the grid to store electrical energy.

What is AC vs DC in battery energy storage?
Every battery has two different "faces" --the DC side where the cells live,and the AC side where the grid interacts. Getting this distinction right sits at the heart of AC vs DC in Battery Energy Storage,because investors only get paid for what shows up on the AC meter. DC energy (MWhdc): The total rated capacity of all cells/modules.

What is a battery storage power plant?
Battery storage power plants and uninterruptible power supplies (UPS) are comparable in technology and function. However, battery storage power plants are larger. For safety and security, the actual batteries are housed in their own structures, like warehouses or containers.
