Within France's electricity generation mix, nuclear energy increased the most, followed by hydropower. Overall, electricity generation in France increased by 45 TWh in ...

Overview Timeline of developments Future projections Offshore auctions Public opinion See also In 2001 the French government initially planned to produce 21% of its electricity consumption with renewable energy in 2010 to comply with European directive 2001/77/CE of 27 September 2001. This means that France had to produce 106 TWh of renewable energy in 2010, up from 71 TWh in 2006. Wind power represents 75% of the 35 TWh additional production in 2010. o In 2016 installed capacity rose above 1 GW for the first time during the year.

French companies' recognised expertise in both onshore and offshore wind is central to France's appeal. The wind energy industry is experiencing steady growth, driven by ...
